Our Realtor website design package gives today's Realtor the control and functionality they need to quickly upload and manage all of their listings. Below is a brief overview of the various screen shots using the CMS Realtor Module.

### Package Features:

- Add predefined values for any attribute in Admin Tab that will create a dropdown input field on the property editing page.
- Pagination back-button support.
- Pagination and sorting works on search results
- Property result pagination via AJAX
- Property queries by custom attributes
- Localized Google Maps
- Customizable templates for different property types.
- Fields such as price, bathrooms, bedrooms, features, address, work out of the box.
- SEO friendly URLs generated for every property, following the WordPress format.
- Customizable widgets: Featured Properties, Property Search, Property Gallery, and Child Properties.
- Google Maps API to automatically validate physical addresses behind-the-scenes.
  - integrates with Media Library, avoiding the need for additional third-party Gallery plugins.
  - Out of the box support for two property types, Building and Floorplan. More can be added via WP-Property API.
  - Property types follow a hierarchical format, having the ability of inheriting settings - i.e. buildings (or communities) will automatically calculate the price range of all floor-plans below them.

### Properties Overview

## Editing Property

- Just click “Add New Property”
  - o Select property type and floor plan
  - o Enter property descriptions and details
  - o Set Feature Image and additional property images
    - Set Property Type, Price, Address, Phone Number, Pet Policies, Area, Bathrooms, Bedrooms, Parking, Lease Terms, Features etc..
  - o Use check boxes select which features you would like visible to viewers and which features you would like to be hidden (such as lease terms or any additional confidential information you don't want viewed).
- Click Publish Property
